Responsive Online Blog Website in PHP and MySQL

Subject : Responsive Online Blog Website in PHP and MySQL

Requirements :

- **Language:** PHP
- **Databases used:** MySQL
- **Design used:** HTML, JavaScript, Ajax, JQuery, Bootstrap
- **Browser used:** IE8, Google Chrome, Opera Mozilla
- **Software used:** WAMP/ XAMPP/ LAMP/MAMP

Description : This is **Responsive Online Blogging Site or Responsive Online Blog Website** that was programmed using PHP and MySQL as the database used.

The online blog site has administrator board where distributed sites, classifications, drafts, web subtleties, interfaces, manager's decision, and the administrator details. The administrator can likewise post his ideal blog of the day and well as overseeing it too.

Much the same as other Blogging locales, this venture offers clients to peruse online journals of different classes. From the administrator board, he/she can include classes, oversee posts and erase classifications. The format is really like WordPress blogging subject. Here, the webpage chairman can include various presents concurring on the classes they need and the online journals can likewise be seen by choosing a specific classification. The plan of this task is basic and the client won't think that its hard to get, utilize and explore.

Conclusion : Just like other Blogging sites, this project offers users to read blogs of various categories. From the admin panel, he/she can add categories, manage posts and delete categories. The layout is pretty similar to WordPress blogging theme. Here, the site administrator can add a number of posts according to the categories they want and the blogs can also be viewed by selecting a certain category. The design of this project is simple and the user won't find it difficult to understand, use and navigate.
